

For immediate release

Cartier Drills 10.3 g/t Au over 5.0 m Below Pusticamica Deposit on the Benoist Property

Val-d'Or, February 27, 2014 - Cartier Resources Inc. (TSX-V: ECR) ("Cartier") announces drill results from two of the five-hole program aimed at evaluating the gold-bearing potential below the Pusticamica Gold Deposit, on the Benoist property. The first drill hole returned an intersection of **10.3 g/t Au over 5.0 meters**.

"These drill results reward our perseverance", commented Philippe Cloutier, President and CEO, "to date all of the holes have intersected the targeted mineralization-alteration zone below the deposit". The holes three and four are completed and samples were sent to the lab for assaying. The final hole of the program is presently in progress.

Table of Drill Results

Drill Hole	From	To	Length*	Gold (Au)	Silver (Ag)	Copper (Cu)
	(m)	(m)	(m)	(g/t)	(g/t)	(%)
PU-14-09	334.0	387.0	53.0	2.4	Pending	Pending
<i>including</i>	334.0	338.0	4.0	3.3	Pending	Pending
<i>including</i>	345.0	350.0	5.0	10.3	Pending	Pending
<i>including</i>	347.0	350.0	3.0	14.2	Pending	Pending
<i>including</i>	365.0	372.0	7.0	3.3	Pending	Pending
<i>including</i>	381.0	386.0	5.0	2.8	Pending	Pending
PU-14-10	430.0	458.0	28.0	0.3	Pending	Pending

* Reported intersections are measured along the hole. Additional drilling required to determine the true thickness of the zones.

The Benoist property is 65 km northeast of the town of Lebel-sur-Quévillon, 25 km south-east of the Bachelor mine and 25 km north-west of the Langlois mine.

About Cartier

The company's objective is to develop and maintain a balanced portfolio of mining projects ranging from exploration to resource definition, development and production. Its VISION is to develop the company's current and future assets into mineral production within a timeframe that is consistent with its human and financial resources while respecting sustainable development practices.
