Cartier Generates New Priority Drill Targets on Benoist Property

Val-d'Or, May 26th, 2015 - Cartier Resources Inc. (TSX-V: ECR) ("Cartier") announces that the OreVision survey completed on the Benoist Property has generated over 100 anomalies. Amongst these, sixteen (16) were selected as drill targets of which eight (8) have a geophysical signature similar to the Pusticamica gold deposit.

Tests, completed in the field and laboratory, have defined the geophysical signature of the gold-bearing mineralization of the deposit. The OreVision survey was conducted with parameters capable of detecting the deposits signature. The results of the survey outlined the position of the deposit and identified [anomalies similar and situated proximal](#) to the deposit.

"Our confidence in the selection of these drill targets is based on their similarities with the geophysical signature of the Pusticamica deposit as well as their [location on the same structure](#) that hosts the deposit" commented Philippe Cloutier, President and CEO."
