

For immediate release

**Cartier Intersects 24.8 g/t Au over 1.0 m and 14.1 g/t Au over 1.0 m  
in a New Zone on the Wilson Property**

**Val-d'Or, June 8th, 2017** – Cartier Resources Inc. (TSX-V: ECR) ("Cartier") is pleased to announce the first results of its ongoing drilling campaign on the Wilson property. The 8,000-m program focuses on the lateral and depth extensions of the Toussaint and Midrim gold structures. Significant results have been intersected in the western extension of the Midrim structure and define a new gold sector north of the Toussaint deposit ([FIGURE](#)). The results, from drill hole WL17-05, are: **24.8 g/t Au over 1.0 m and 5.0 g/t Au over 3.0 m** including **14.1 g/t Au over 1.0 m**.

*"The discovery of this Gold Zone, over 100 meters north of the Toussaint Deposit opens additional potential for the property and will be factored into future drilling programs"* commented Philippe Cloutier, President and CEO of Cartier Resources, adding *"The Wilson property is located in the heart of Osisko Mining's recent District scale play in the Urban Barry Belt, 15 km east of Lebel-sur-Quévillon and 75 km west of the Windfall Lake gold deposit."*

Additional drill holes have been added to the initial 18-hole program and is now expected to take until late June to complete including the return of all assays, subject to local lab availability.

**Quality Assurance / Quality Control**

All lengths, mentioned in this press release, were measured along the drill core. The NQ core samples are crushed up to 80% passing 8 mesh sieves and then pulverized up to 90% passing a 200-mesh sieve. Cartier inserts 5% of the number of samples in the form of certified standards and another 5% in the form of sterile samples to ensure quality control. The samples are analyzed at the Techni-Lab laboratory (Actlabs), located in Ste-Germaine-Boulé, Quebec. The 50 g pulps are analyzed by fire assay and atomic absorption. For samples containing visible gold, 1000 g of rock are directly analyzed by the "Metallic Sieve" method.

The scientific and/or technical information presented in this press release has been reviewed and approved by Mr. Gaétan Lavallière, P. Geo., Ph. D. and Vice President for Cartier Resources. Mr. Lavallière is a qualified person as defined by National Instrument 43-101.
