

Technical Summary and Diamond Drill Results
CHIMO MINE PROJECT / CONTINUOUS DRILL PROGRAM
Since July 11th 2017 and updated March 14th 2019

105 drill holes for a total of 47,588 m

PHASE I (Surface)

Drill testing of 19 Gold Zones
52 drill holes for a total of 24,219 m

PHASE II

Drill testing of 7 Gold Zones and Discovery of Zone 5NE
33 drill holes for a total of 13,256 m

PHASE III

Drill testing of 3 Gold Zones
Drilling in progress

PHASE I (Deep)

Drill testing of 4 Gold Zones
20 drill holes for a total of 10,113 m

The following tables of diamond drill hole assay results have been disclosed previously in press releases related to the Chimo Mine project since the drill program commenced on July 11th 2017.

Additional notes for information presented in the tables below:

- Color coding for each table header refers to Phase of drilling as presented above
- *Lengths are expressed along drill core axis. The true thickness was not determined. **The Company is currently building wireframes for the 24 mineralized zones and existing infrastructure of the former Chimo Mine in order to determine the dimensions (thickness) of each mineralized zone as accurately as possible.***
- *Tables of results are presented in order from most recent to oldest.*

Drill Hole	From (m)	To (m)	Length (m)	Au (g/t)	Gold Zone	Gold Structure
